are from our
own region

150
students from
local schools
have visited
our HQ in 2016

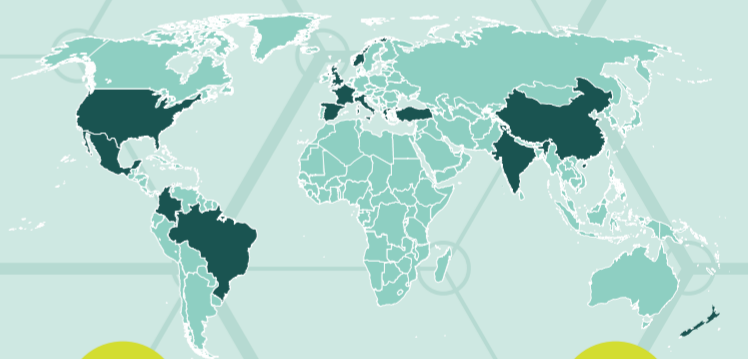

For Valagro, **sustainability** it is not just a value. It is the heart of our business. Sustainability is our active ingredient, and has been for over 30 years.

A simple and effective **formula**, based on the marriage of science and innovation, passion for nature and our customers, confidence in our own people and in what do each day to build and deliver more sustainable agriculture.

This leaflet, made to have the lowest environmental impact possible in terms of paper use, presents the main social, business and environmental results included in our **2017 Sustainability Report**.

IN THE SPOTLIGHT

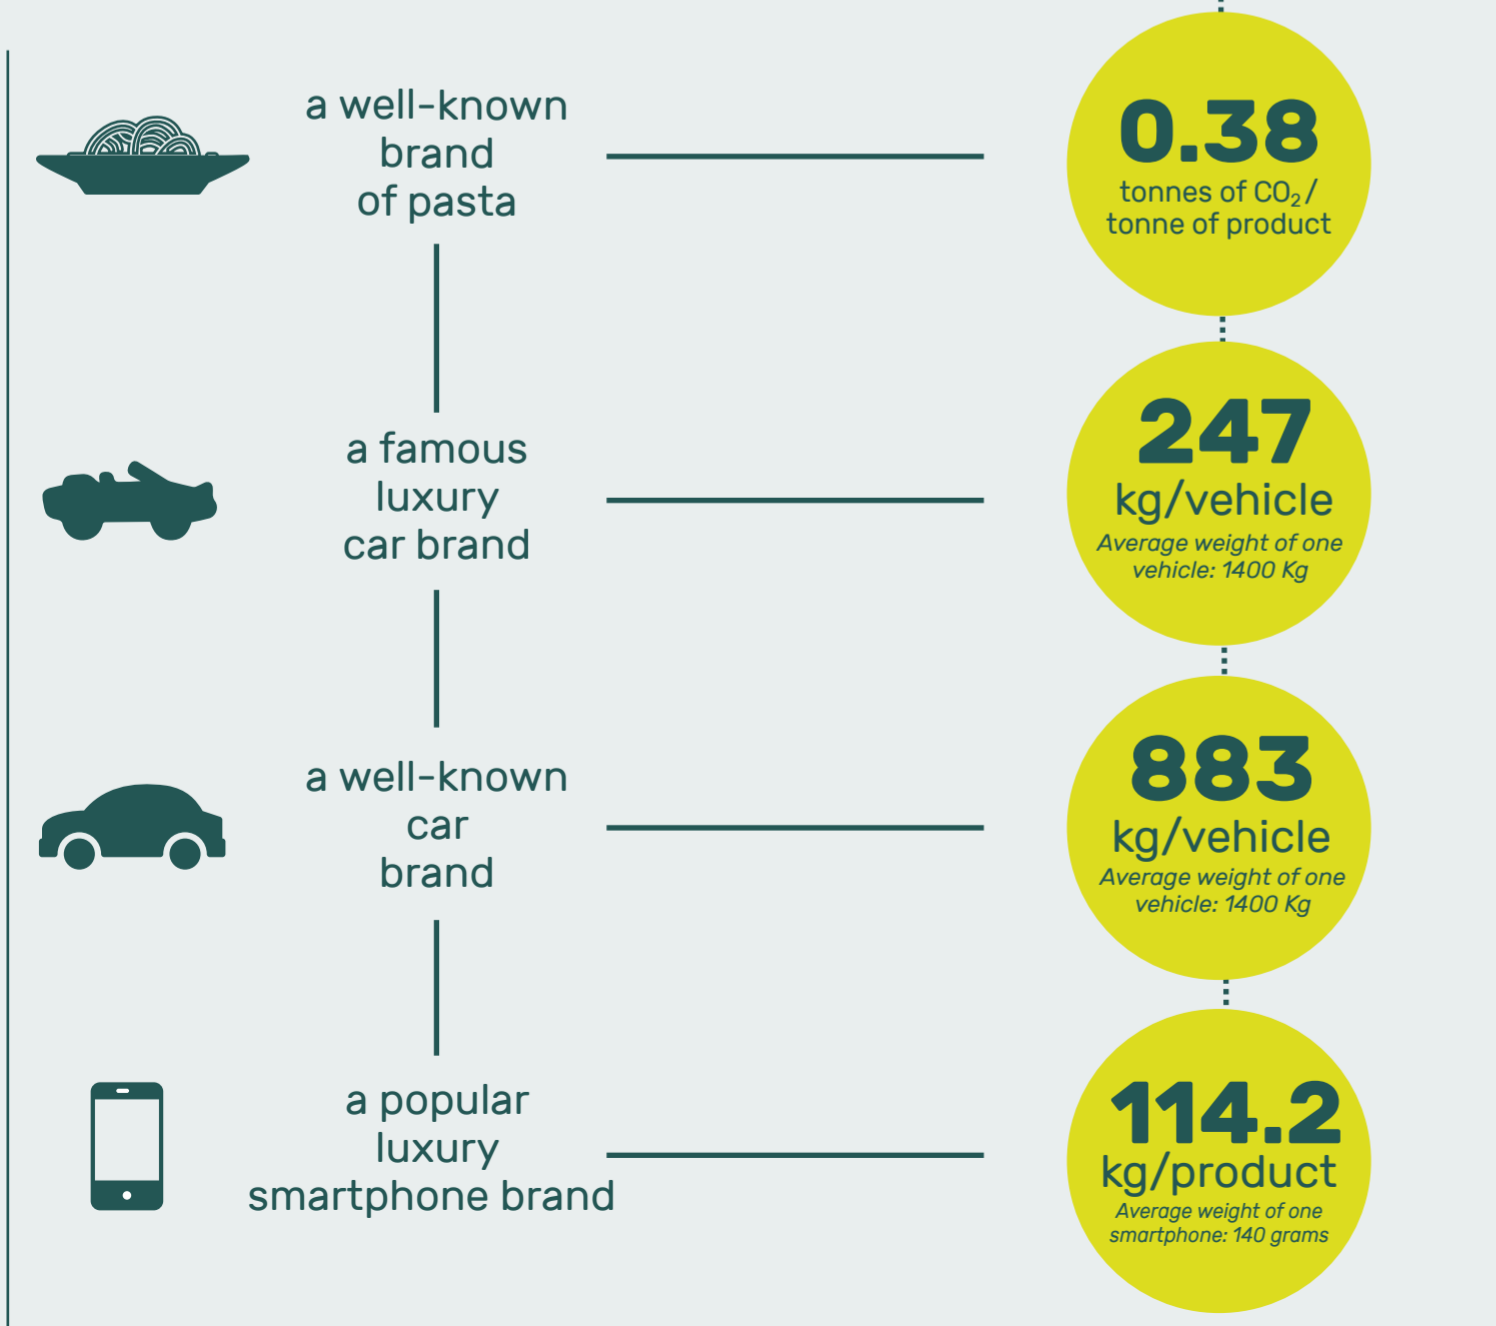

In recent years, concentrations of the key atmospheric gases that cause global warming (water vapour, carbon dioxide, methane, nitric oxide and ozone) have increased exponentially. The European policy on climate change is clear: reduce greenhouse gas emissions by at least 40% compared to 1990 levels by 2030, in all economic sectors, from transportation to construction, and from agriculture to waste.

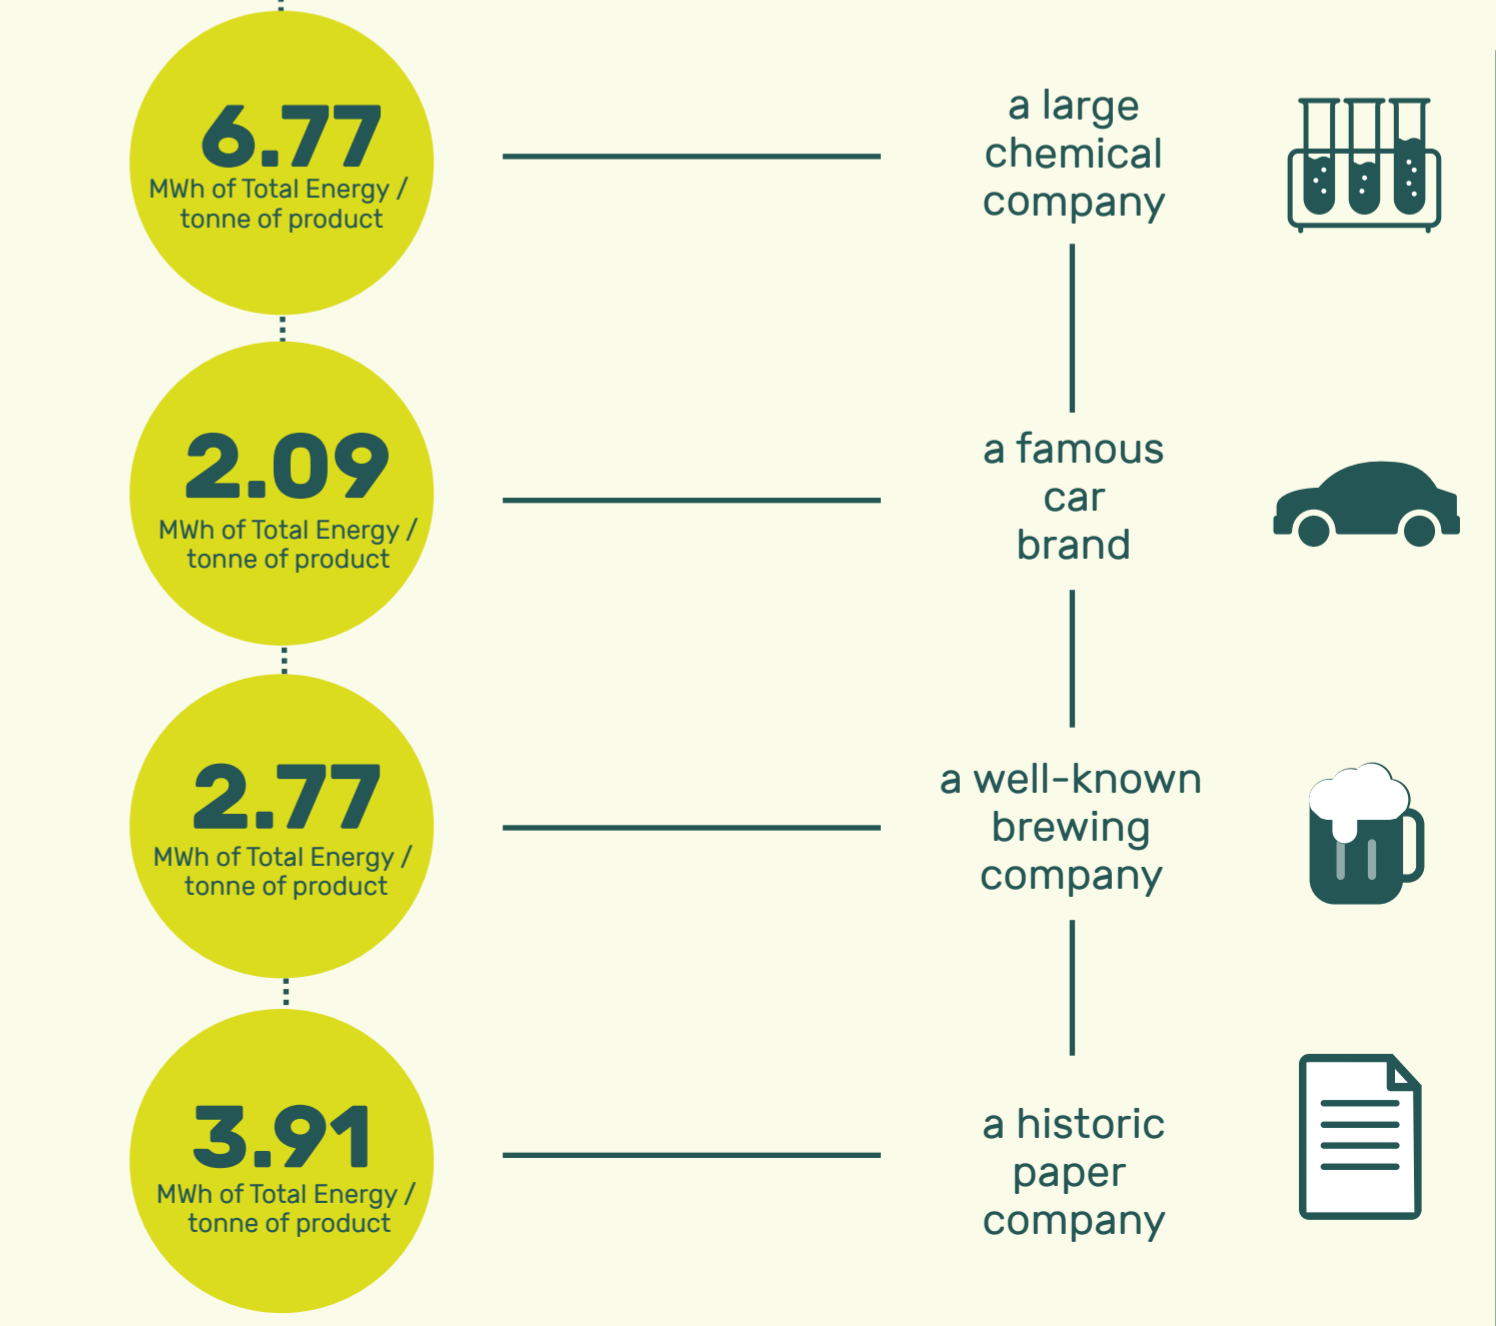

Lowering climate-changing gases through energy efficiency measures should be implemented at all levels, starting with major energy-sector related interventions and meeting all of our daily needs. In fact, "doing more with less" is the distinguishing feature of Valagro's manufacturing processes, in line with the approach that the European institutions and main international organizations are urgently promoting to overcome the challenge of sustainability.
